DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of group I, claims 1 - 5 in the reply filed on September 17, 2009 is acknowledged. The traversal is on the ground(s) that unity of invention exists and that there is no serious burden. This is not found persuasive because as indicated by the rejections above, the prior art teaches solid cellulose gel media. Thus, it is reiterated that the claims do not contain a special technical feature which contributes over the prior art.

The requirement is still deemed proper and is therefore made FINAL.

Claims 7 – 13 are withdrawn as being drawn to non-elected subject matter. Claims 1 – 5 have been considered on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Shigenori (JP 55-044312).

Shigenori teaches a solid media comprising a porous, cellulose gel, wherein the gel is made by dissolving cellulose in a thiocyanate salt (abstract).

The reference anticipates the claimed subject matter.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1 – 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shigenori (JP 55*044312) as evidenced by Hideyuki et al. (JP 10/19503).

Shigenori teaches a solid media comprising a porous, cellulose gel, wherein the gel is made by dissolving cellulose in a thiocyanate salt (abstract).

The reference does not teach the media with the claimed degree of crystallization, molecular weight, concentration, or porosity. However, at the time of the claimed invention, these were known result effective variable that were routinely optimized by routine experimentation and procedure. In support, Hideyuki teaches porous cellulose particles having various degrees of crystallization, molecular weights of 500,000 – 5,000,000 and other variable

characteristics. At the time of the claimed invention, one of ordinary skill in the art would have been motivated by the teachings of Shigenori and routine practice as evidenced by Hideyuki, to optimize the various characteristics of the gel media of Shigenori with a reasonable expectation for successfully obtaining an effective cellulose gel media.
